PRODUCT INTRODUCTION

Metal mirror frames are more than just practical; they are powerful decorative elements that reflect light and showcase exquisite design. Custom-made to precise specifications, these frames transform mirrors into focal points, adding character, depth, and a touch of bespoke artistry to any interior.

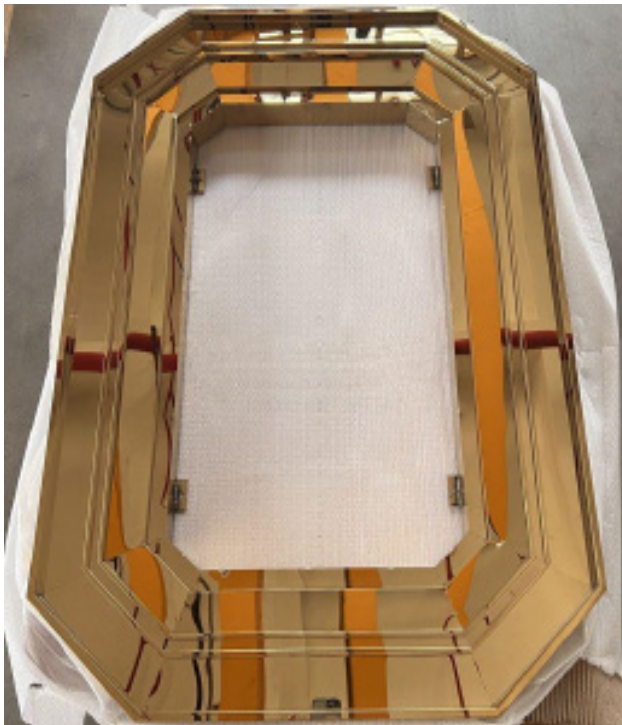

Our custom manufacturing capabilities allow us to create frames in any size, shape, or color required. With a fully equipped metalworking facility (featuring advanced laser cutting, CNC machining, forging, and welding equipment), we can fabricate mirror frames to meet exact design specifications. We offer various frame construction options, such as aluminum outer frames, stainless steel tube-welded frames, and stainless steel profile frames, with custom stainless steel frames being our specialty and most popular choice. By merging traditional metalcraft artistry with modern precision engineering, we deliver unique, high-quality mirror frames that exhibit both a handcrafted touch and flawless execution.

PRODUCT FEATURES

Stainless steel Mashrabiya panels offer exceptional strength and corrosion resistance, and are available in premium finishes such as brushed, mirrored, and etched. Aluminum panels, on the other hand, are lighter, more cost-effective to install, and come in a variety of color options through powder coating and anodizing. Common finishes include powder coating and PVDF coating.

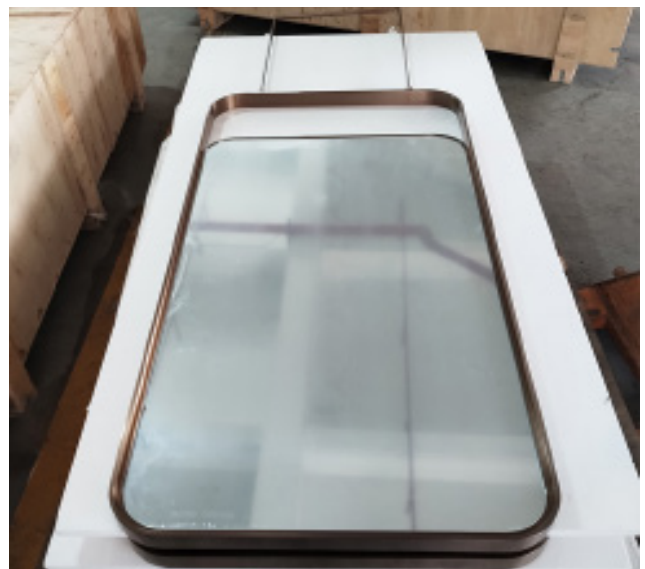

Rich Finishes & Colors: Choose from a wide range of surface finishes, including brushed (hairline matte), mirror polish (8K), sandblasted matte, etched patterns, spray paint, antique patina, powder coating, and PVD vacuum plating. A variety of colors is available as well: classic metal tones or PVD-coated hues like gold, rose gold, black titanium, bronze, and more. These finishes are not only visually striking but also firmly bonded and long-lasting, ensuring the frame maintains its luster over time.

Expert Craftsmanship: Each frame is fabricated with precise laser cutting, CNC machining, and meticulous hand welding and polishing, resulting in accurate construction, solid joints, and refined details. A strict quality control process is implemented throughout production, guaranteeing that every frame meets exact dimensional specifications and superior quality standards.

Versatile Styles: We offer designs ranging from sleek modern minimalism to ornate classical luxury. Frames can be made in traditional shapes (rectangular, round, etc.) or unconventional geometries (octagons, hexagons, arched tops, and more) to suit the aesthetic needs of different spaces.

Innovative Design Options: Special creative features are available to elevate your mirror design. For example, we can produce frameless-look “floating” mirrors that appear to levitate, integrate LED backlighting or frosted elements into the frame for a gentle ambient glow, or craft decorative stand-mounted frames (“block” mirror designs) that serve as standalone accent pieces. We can even create multi-mirror compositions for layered reflective art. These options allow the mirror frame to go beyond its functional role – becoming a unique visual centerpiece in any space.

PRODUCT SPECIFICATIONS

Frame Types: Various construction types are available, including aluminum outer frames, stainless steel tube frames (welded tubular frames), and stainless steel profile frames (extruded section frames), among others. We will customize the structural approach to best fit the design.

Materials: Typically fabricated in 304 or 316 stainless steel for optimal durability. High-strength aluminum alloy or other metals can also be used upon request.

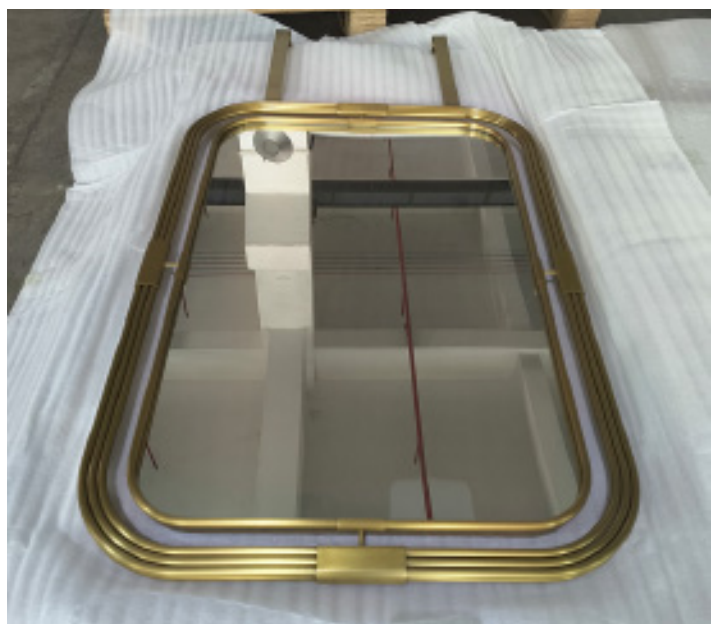

Dimensions: Made-to-order according to the provided mirror dimensions and design requirements. There are no standard size limitations – we can create anything from small vanity mirror frames to oversized wall-spanning frames, accommodating even the most unusual dimensions.

Shapes: Standard shapes such as rectangles, squares, rounds, and ovals are available, as well as custom shapes like octagons, hexagons, arch-top frames, and other geometric or irregular forms.

Finishes: Available finishes include brushed (satin matte), mirror polished (8K high-gloss), sandblasted matte, etched patterns, spray-painted, antique distressed, powder-coated, or PVD color-plated surfaces.

Colors: A variety of colors can be achieved. Options include natural metal tones (stainless steel silver in brushed or mirror finish) and PVD plated colors like gold (brass tone), rose gold, black titanium, bronze, etc. We can also match custom color requests.

Mirror Options: Different mirror glass types can be supplied to pair with the frame, such as standard silver mirror, ultra-clear (low-iron) mirror, antique-style distressed “mercury” mirror, or custom-pattern frosted mirror, depending on the desired look and function.

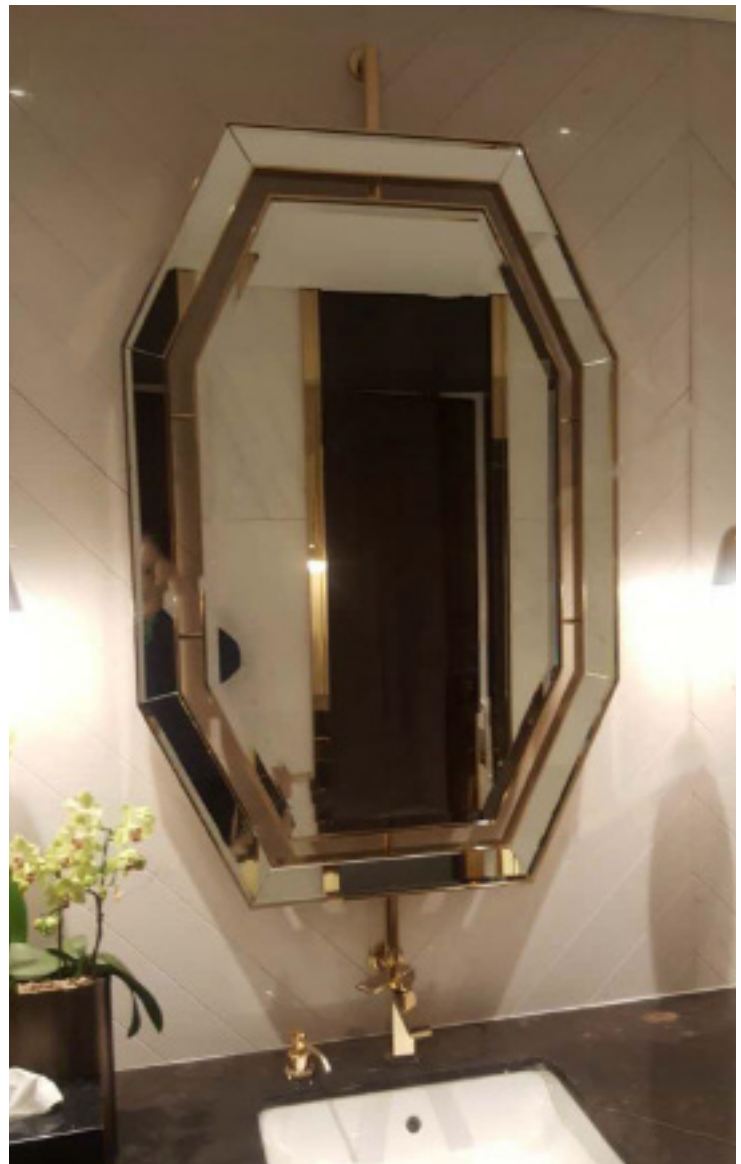

PRODUCT APPLICATIONS

Residential Spaces: Ideal for living rooms, bedrooms, bathrooms, and more. A metal-framed mirror can serve as an eye-catching wall accent (for instance, above a fireplace or in an entryway), a full-length dressing mirror, or a vanity mirror, adding a sense of depth, light, and artistic style to the home.

Hospitality & Commercial Spaces: Perfect for luxury hotels, restaurants, clubs, offices, and other high-end commercial interiors. Large decorative mirrors with metal frames can be mounted in lobbies, corridors, or bathrooms to enhance brightness and elegance, contributing to a sophisticated, upscale ambiance.

Retail & Exhibitions: Suitable for boutiques, brand showrooms, salons, galleries, and exhibition spaces. Unique custom mirror frames not only provide functional reflection (such as for fitting rooms or displays) but also act as visual focal points in the decor, elevating brand image and creating a memorable experience for customers and visitors.
