STAINLESS STEEL HONEYCOMB CEILING SYSTEM

We specialize in premium custom metal solutions. Our stainless steel-faced aluminium honeycomb composite panels offer exceptional performance for ceilings and walls.

Aluminium Honeycomb Composite Panel: A rigid, ultra-lightweight sandwich panel. It features a corrosion-resistant aluminium honeycomb core (aerospace-derived) bonded between two metal facings. Our ceiling systems use stainless steel as the top decorative facing.

Superior Flatness & Rigidity: The honeycomb core ensures exceptional dimensional stability and resistance to bending or sagging, crucial for large spans and flawless aesthetics.

1

Install expansion screws, fix the screw rod and hook, install the main keel and triangular sub keel

2

Install stainless steel honeycomb panels one by one along the triangular sub keel

3

According to the second steps, and so on

4

Finally complete the installation

STAINLESS STEEL COMPOSITE WALL PANEL SYSTEM

- These wall cladding panels feature a stainless steel face permanently bonded to an aluminium honeycomb core.
- They deliver superior impact resistance and dimensional stability for flawless large surfaces.
- The extreme lightness eases handling and installation on vertical surfaces.
- They offer outstanding corrosion resistance, hygienic easy-clean surfaces, and typically achieve high fire ratings.
- The stainless face allows extensive customization in finish and form, ideal for demanding interior and exterior walls.
